Into A Greener Future

Green CEO Summit 2010

Green Techno Conference 2010

BACKGROUND

Industry experts know their manufacturing processes best. Often the public officials writing and enforcing regulations do not have much background in the industry sector to which the regulations apply. Industry-initiated programs can enable those who are most familiar with products and processes to develop appropriate and cost-effective solutions.

The Green CEO Summit together with Environmental Sustainability Techno Conference and Exhibition will be assessing the state of play in industry overview on environmental concern with an update on new developments (such as the Global Compact and other voluntary initiatives), focusing on the challenges and opportunities for the private sectors in the world to achieve economical prosperity, social responsibility and environmental sustainability.

SPONSORSHIP

Sponsorship of this event will make your company stand out as a leader in this burgeoning industry and will leave a strong impression of your brand in people's minds. Sponsors have an incredible amount of presence and in conjunction with an exhibition stand it will not only give your company optimum exposure but also the opportunity for delegates to meet you and your Executives to find out more about your role and business opportunities in the sector
